

ABHIJEET PATHAK

Senior Security Consultant

+91-9109069565 | abhijeetpathak9826@gmail.com | linkedin.com/in/abhijeet-pathakk

PROFESSIONAL SUMMARY

Security consultant with 5 years of experience across penetration testing, threat modeling, and cloud security for banking, telecom, and cloud services clients. Specializes in Active Directory compromise testing and network segmentation review, and has pioneered GenAI/LLM security testing — including penetration testing of chatbots, AI agents, and downstream GenAI services, an emerging area where testing methodology is still forming industry-wide. Leads threat modeling initiatives to proactively surface security risks before they reach production, and partners directly with cloud service provider security teams on AWS infrastructure assessments. Builds automated security tooling — custom Burp Suite extensions, an SQLi detector, and an AI-powered reporting and correlation engine — to scale testing coverage and speed up detection. Recognized with a personal CVE (CVE-2022-4314) and 50+ Hall of Fame / Bug Bounty awards from companies including Cloudflare, Microsoft, and Twitter.

TECHNICAL SKILLS

- **Penetration Testing:** Web, API, Mobile, Internal & External Network, Active Directory, GenAI/LLM
- **Security Engineering:** DevSecOps, CI/CD Security, Container & Kubernetes Security (Docker, K8s)
- **Security Assessment:** Cloud Security (AWS), Attack Surface Management, OSINT, Network Segmentation Review, Threat Modeling, Secure Code Review
- **Tools:** Burp Suite, Nessus, Nmap, Nipper, SQLmap, Postman, MobSF, MetaSploit, Nuclei, Claude Code, Cursor.
- **Scripting & Automation:** Python, Bash

PROFESSIONAL EXPERIENCE

Senior Security Consultant — Kroll | Oct 2023 – Present

- Conduct penetration testing and Active Directory compromise assessments across web, mobile, API, and network environments (Nessus, Nipper) for banking, telecom, and cloud services clients, uncovering multiple domain-compromise paths for enterprise clients.
- Pioneer GenAI penetration testing across chatbots, AI coding agents, Voice AI agents, MCP servers, multi-agent orchestrators, and RAG pipelines, uncovering novel attack vectors in emerging agentic AI systems.
- Lead threat modeling initiatives to proactively identify security risks and guide mitigation strategies across client engagements.
- Partner with a cloud service provider's internal security team on cloud security initiatives and infrastructure assessments.
- Build internal automation tooling and custom Burp Suite extensions (SQLi detector, JS analysis tool, NPM dependency scanner), and contribute an AI-powered reporting and correlation algorithm to the firm's security product, GAP.
- Own client-facing engagement delivery end-to-end — kickoffs, status updates, executive readouts — and automate client-specific report templates and workflows to standardize team reporting and cut turnaround time.
- Lead technical interview loops for consultant hiring and train newly hired peers to proficiency.

Security Consultant — RedHunt Labs | Dec 2021 – Sept 2023

- Identified high-severity vulnerabilities — RCE, SSRF via AWS metadata bypass, SQL injection past Cloudflare/AWS WAF, and LFI — across web, API, and Android applications for global clients.
- Ran continuous Attack Surface Management for clients with 200,000+ monthly assets, surfacing high-impact vulnerabilities and data leaks.
- Delivered test cases, reports, and POCs using Burp Suite, Nessus, Nmap, SQLmap, and Postman, coordinating directly with clients on remediation.
- Built automation tooling in Python, Bash, and Go to accelerate vulnerability discovery and repetitive testing tasks.

Associate Security Consultant — SecurityBulls Intelligence | Jun 2021 – Dec 2021

- Tested web, API, and Android applications, identifying high-severity vulnerabilities using Burp Suite, Nmap, SQLmap, and Postman.

- Performed Dynamic Application Security Testing (DAST) and source code reviews across web and mobile applications.
- Developed Python and Bash automation tools to streamline repetitive testing tasks.

EDUCATION

Bachelor of Technology — Samrat Ashok Technological Institute | 2018 – 2022

CERTIFICATIONS & ACHIEVEMENTS

- CVE-2022-4314 — nvd.nist.gov/vuln/detail/CVE-2022-4314
- 50+ Hall of Fame / Bug Bounty awards, including Cloudflare, Dell, Twitter, Microsoft, Bitgo, Lacework, Panther Labs, Sixt, and WalletHub
- Certified Network Security Specialist (CNSS) — ICSI
- Practical Ethical Hacking – The Complete Course — Heath Adams
- Python for Pentesters — EC-Council CodeRed
- Ethical Hacking Course — zSecurity (Zaid)
- Automate the Boring Stuff with Python — Udemy

PERSONAL PROJECTS

- **GitSki** — open-source GitHub recon automation tool (Python) that bypasses GitHub scan restrictions.
github.com/neverjunior/GitSki
- **Subdomain Discovery Suite** — recursive active/passive enumeration framework combining custom modules with open-source tools, enhanced by a fine-tuned LLM for subdomain prediction.
- **AI-Powered JS Analysis Tool** — monitors JavaScript in real time to surface secrets and new endpoints using AST parsing and AI.
- **Parshu** — Bash framework automating recon and bug-hunting workflows (LFI, XSS, SQLi, SSRF, fuzzing, GitHub recon, Shodan).
- **Source Code Analyzer & Internal Scripts** — large-scale automated testing across millions of assets (SQLi, XSS, open redirects, host header injection, CORS misconfiguration).
